ABSTRACT Objective: To observe the clinical curative effects of intra-articular injection of TypeⅡ recombinant human tumor necrosis factor receptor – Fc fusion protein (rhTNFR:Fc) combined with Chinese herbal steaming and washing therapy for treatment of knee osteoarthritis (KOA). **Methods:** Sixty patients with KOA were randomly divided into 2 groups, 30 cases in each group. The patients were treated with combination therapy of intra-articular injection of rhTNFR:Fc with Chinese herbal steaming and washing (rhTNFR:Fc group) and combination therapy of intra-articular injection of sodium hyaluronate (SH) with Chinese herbal steaming and washing (SH group) respectively. The knee visual analogue score (VAS) and Western Ontario and McMaster Universities (WOMAC) osteoarthritis score were compared between the 2 groups before and after the treatment, and the total clinical curative effects were also compared between the 2 groups at 3 months after the end of the treatment. **Results:** There was no statistical difference in the knee VAS scores and WOMAC scores between the 2 groups before the treatment (7.15 ± 1.09 vs 6.90 ± 1.52 points, $t = 1.045, P = 0.309$; 54.75 ± 3.23 vs 55.45 ± 3.11 points, $t = 0.700, P = 0.493$). The knee VAS scores (3.05 ± 0.76, 4.10 ± 0.97 points) and WOMAC scores (16.55 ± 2.65, 27.20 ± 3.17 points) of all patients decreased at 3 months after the end of the treatment ($t = 14.173, P = 0.000; t = 10.101, P = 0.000; t = 34.451, P = 0.000; t = 39.161, P = 0.000$). The decreased degree of knee VAS scores and WOMAC scores of rhTNFR:Fc group were greater than those of SH group (4.10 ± 1.29 vs 2.80 ± 1.31 points, $t = 3.771, P = 0.001$; 38.20 ± 4.96 vs 28.25 ± 3.23 points, $t = 8.132, P = 0.000$). At 3 months after the end of the treatment, 10 patients were cured, 12 got a good result, 7 fair and 1 poor in the rhTNFR:Fc group; while 6 patients were cured, 8 got a good result, 13 fair and 3 poor in the SH group. The rhTNFR:Fc group surpassed the SH group in the curative

effect ($Z = -1.987$, $P = 0.047$). **Conclusion:** The therapy of intra-articular injection of rhTNFR:Fc combined with Chinese herbal steaming and washing can effectively relieve the knee pain and promote the knee function recovery in the treatment of KOA, and its curative effect is better than that of intra-articular injection of SH combined with Chinese herbal steaming and washing, so it is worthy of popularizing in clinic.

2.2.2 关节腔注射玻璃酸钠 采用上述注射方法向关节腔内注入玻璃酸钠注射液 (昆明贝克诺顿制药有限公司生产, 批号 4DD232), 每次 2.5 mL。每周 1 次, 5 周为 1 个疗程, 共治疗 1 个疗程。

2.2.3 中药薰洗 于关节腔内注射药物 2 d 后, 采用吉林省中医药科学院自制的薰洗方薰洗, 药物组成: 伸筋草、透骨草、香附、桃仁、红花、川芎、艾叶、乳香、没药、海桐皮、穿山龙、防风各 10 g。每次薰洗 20 min, 每日 1 次, 7 d 为 1 个疗程, 连续治疗 3 个疗程。

2.3 统计学方法 采用 SPSS17.0 统计软件对所得数据进行统计学分析, 2 组患者性别的组间比较采用 χ^2 检验, 年龄、病程、VAS 评分及 WOMAC 评分的组间比较采用 *t* 检验, 检验水准 $\alpha = 0.05$ 。

4 讨论

KOA 是由创伤、超负荷运动、肥胖等导致关节软骨出现原发性或继发性退行性改变,并伴有软骨下骨质增生、软骨剥脱,从而使关节逐渐破坏,最终发生膝关节功能障碍的一种疾病^[4-5]。该病属于中医“骨痹”范畴,多因年老体衰、筋脉失养或久卧湿地、感受风寒湿邪等,导致气血运行不畅所致。该病常用的中医药疗法包括口服或外用中药、穴位注射、针灸和推拿等,西医疗法包括口服非甾体类抗炎药或硫酸氨基葡萄糖、关节腔注射激素或玻璃酸钠、膝关节镜手术或膝关节置换术等,虽然均有效果,但疗效不一。

玻璃酸钠是膝关节软骨基质和关节滑液的主要成分,具有润滑和保护关节的作用,关节腔注射玻璃酸钠是治疗 KOA 的常用方法,可以有效缓解疼痛、改善运功能,但是疗效并不持久^[6-8]。肿瘤坏死因子 α (tumor necrosis factor alpha, TNF- α) 是参与关节病变的主要细胞因子和炎性介质,在骨关节炎的发病过程中起着重要作用,不仅促进单核巨噬细胞与粒细胞吞噬趋化,释放溶酶体酶、氧自由基、组胺等,导致软骨基质降解,而且还诱导 T 细胞和 B 细胞活化,加重免疫损伤;其含量高低与关节病变程度密切相

关^[9-11]。膝关节腔注射 rhTNFR:Fc 可以降低关节液 TNF- α 水平,缓解疼痛症状,改善膝关节功能^[12-13]。中药薰洗治疗 KOA,能有效改善局部血液循环,促进炎性介质的吸收,有利于膝关节功能恢复^[14-15]。

本研究结果显示,采用关节腔注射 rhTNFR:Fc 联合中药薰洗治疗 KOA,可以有效缓解膝关节疼痛,促进膝关节运功能恢复,疗效优于关节腔注射玻璃酸钠联合中药薰洗治疗,值得临床推广应用。
